

INTRODUCTION

Viridian Landscape Studio heals ecosystems while making beautiful places for people.

For more than 20 years, Viridian has been designing resilient landscapes that enrich the built and natural environments. Our approach is rooted in a deep understanding of green infrastructure, a passion for native vegetation, and a belief that everyone should have access to beautiful landscapes - regardless of age, income, or ability. From pocket parks to campuses to regional master plans, our work balances practical solutions with lyrical design. By considering issues like flood control and soil remediation alongside strategies for inclusive and impactful placemaking, we help clients realize their goals while uplifting communities. When we restore native landscapes, native landscapes restore us.

Viridian was founded in 1999 by Tavis Dockwiler and Rolf Sauer with the mission to bridge ecological expertise with meaningful design. Today, Tavis leads a dedicated team united by their shared commitment to promoting sustainability and social equity through landscape design. Viridian partners with developers, architects, institutions, and local governments to create enduring landscapes for living, learning, playing, and healing. Through professional partnerships, we leverage our unique abilities and resources to create resilient spaces and places that have the power to transform communities. We work closely with our partners at every stage of the development process, and equip our clients with the knowledge and tools to continue their stewardship long into the future.

In addition to landscape design and ecological master planning, Viridian's services include construction documentation and administration, post-occupancy evaluations, and land stewardship education. Viridian Landscape Studio Ltd. is a Certified Women's Business Enterprise (WBE) and Disadvantaged Business Enterprise (DBE).
